

Paint Mix Sets

Paint, Powder & Sealant System Integrators
- Specializing in Stainless Steel

The heart of the paint mix room is the fluid delivery system. Precise Finishing Systems has designed and developed a modular built paint delivery system for this application. Paint Mix Sets are skid based systems that are completely fabricated and assembled by Precise Finishing Systems. These systems include the paint tanks and agitators, transfer and delivery pumps, filters, regulators and all interconnecting piping and electrical wiring, which results in a paint delivery system ready to install.

The modular built concept allows Precise Finishing Systems to provide significant time and cost saving benefits such as lower cost shop labor as compared to field labor for fabrication and less time to install in the field. Paint Mix Sets also offer the opportunity to make changes and/or sign off prior to shipment to the jobsite.

Precise Finishing Systems has extensive knowledge and can provide paint mix room and fluid delivery system process controls including:

- Tank Level Monitoring and Control
- Automatic Transfer
- In-line Pressure Monitoring
- Flow Rate and Totalization
- Viscosity Monitoring and Control
- Paint Circulation Design

Features & Benefits

- Modular Design
- Lower Cost Shop Fabrication
- Quality Tested Before Shipment
- Ready to Install
- Low Voltage and High Voltage Options

Single Tank Paint Mix Set

Dual Tank Paint Mix Set
