

Products and Services

Paint, Powder & Sealant System Integrators
- Specializing in Stainless Steel

Paint Mix Sets

Custom material delivery systems are modular built and ready for installation upon arrival to the job site.

Specialty Stainless Steel Fabrication

Custom built stainless steel products are tailored to customers drawings and specifications. Precise Finishing Systems will fabricate, integrate and assemble products using "free issued" materials from customers.

Paint Temperature Control (PTC)

The modular "Accutrol" system utilizes inline heat exchangers mounted to a common skid base. Configurations include single color or multiple unit skids with plate and frame, shell and tube or custom tube and tube heat exchangers.

Sealer Temperature Control (STC)

This compact line of water conditioning units creates and circulates modulated warm and chilled water to various heat transfer mediums including high pressure heat exchangers, jacketed trace covers and co-axial hoses.

Tanks

Stainless steel, carbon steel and electropolished stainless steel holding vessels are built as standard designs or customer specifications. All tanks are designed by utilizing AutoCAD and are preapproved before construction. Sizes range from 5-10,000 gallons.

Process Monitoring and Control

Precise Finishing Systems has 20 years of experience in designing and providing various flow, pressure and level systems including all field equipment and control panels.

Turnkey Paint Systems

Design, engineering, modular construction, complete installation and project management services are available for any size paint circulation, sealant and adhesive or powder project.

Field Service

Staff site managers and field service technicians provide field project management and start up, training, calibration and commissioning for all products worldwide.
